Report Description

This report limits the quantities of managed waste to waste received from off site. For each defined waste management method category, this report provides the aggregate National Biennial RCRA Hazardous Waste Report managed quantity of hazardous waste under the method, the quantity as a percentage of the total national managed quantity, the number of facilities contributing to the aggregate National Report Managed Quantity and the number of facilities as a percentage of the total facility count.

Three views are provided. The first report uses an ascending alphanumeric sort on the ranges of management type code values. The second is sorted in descending order by the National Biennial RCRA Hazardous Waste Report managed quantity for each method. The third report is sorted in descending order by the number of facilities contributing to the quantity.

All managed quantities refer to the received quantities flagged for inclusion in the National Biennial Report, managed by handlers flagged for inclusion in the National Biennial Report.
